Preventive Medicine

Dear [REDACTED]:

I have recommended EMR---Allscripts to your office. I know that your group is quite large and so is Allscripts, which is an Internet-based model and has been around for a long time with lots of users. They are currently the most used in the State of Texas.

The reason for my advocacy and strong recommendation is the reliability of the EMR support team. What I have learned is that all of the EHRs' contents or templates are similar. But at the end of the day, what is the most crucial is the training and scrupulous SUPPORT from the EHR Software team.

Furthermore, internet-based EHR is far more superior than server based EHR as you do not have to worry about storage and security, etc. I am so passionate about Allscripts-EMR because with their keen support and diligence, I was able to implement EHR into my office in 2 months ... as you know I practice both OM and FP.

They also revealed their friendliness and accommodation to truly customize my Occ-Med Practice while saving me tremendous time and costly upgrades. This is a company that will truly customize your templates without any added costs.

I would be more than happy to set up a conference with you and your staff or have lunch or dinner with your group. Your manager is welcome to come by and take a look at the patient flow and check out how easily it is to navigate through the system.

Good Luck ... but I think you should look at the support more keenly. Besides these guys are present locally and for support, this is very vital.

So long,

Pat
